WATER RESOURCES BULLETIN 2-23  
WATER WELL RECORDS FOR ONTARIO  
REGIONAL MUNICIPALITIES OF HALDIMAND-NORFOLK  
1946-1975

---

INTRODUCTION

This publication is one of a series which presents water-well information for the Province of Ontario. This bulletin contains water-well data for the Regional Municipalities of Haldimand-Norfolk for wells constructed during the period 1946 to 1975. Table 3 lists previous reports in which similar data have been published.

The information in this bulletin has originated from water-well records completed by water-well drilling and boring contractors licensed in Ontario. The production of this publication was carried out through the use of computer storage and printout facilities. The codes and abbreviations used in the main text are explained in the section entitled, "Explanation of Column Headings".

The geographical area covered by this bulletin is shown on the map on page iv. A summary of the water-well statistics pertaining to the area is displayed in Table 1.

## Acknowledgements

The Ministry of the Environment gratefully acknowledges the assistance and service rendered by the water-well drilling and boring contractors who submitted the water-well records. This information provides a basic and unique tool in the assessment of ground-water conditions throughout Ontario.

This bulletin was prepared by staff of the Water Resources Branch who were ably assisted by staff of the Financial and Administrative Services Branch.

## WATER WELL RECORDS

Each time a licensed water-well contractor constructs a well, a record of the well is submitted to the Ministry of the Environment. The record is then field-checked for reasonable accuracy by the Regional Water-Well Inspector. Subsequently, the information is entered on computer file in Head Office and the original record is filed at the respective Regional Office of this Ministry.

A selection of the important information from each record has been compiled in this bulletin. All data concerning the location, owner's name, date of construction, geological log, screen, water levels, well yields and water use are included. Additional information concerning casing length, drilling method and well plugging are not included in this publication, but are available for any particular record upon request from the Regional Office.

## EXPLANATION OF COLUMN HEADINGS

- MUNICIPALITY** The water-well records in this bulletin are listed by the municipal names in use prior to the change to regional government structure. The records are tabulated in alphabetical order according to geographical townships, towns and villages. The records listed in the geographical townships also show the concession and lot numbers, but no concession or lot numbers are given for those wells located in the built-up towns or villages.
- CONCESSION** The majority of townships in Ontario were surveyed into a regular pattern of concessions and lots; however, in some areas, geographical or historical factors may have created surveys of irregular shapes or patterns. This has resulted in many survey descriptions which are unique to certain areas. The abbreviations used in this bulletin to describe such surveys and tracts are listed below.

WELL NO. (Well Number) This is a unique number identifying each well within the province.

UTM (Universal Transverse Mercator Co-ordinates in Metres)  
EASTING This location system makes use of a square grid, 1,000  
NORTHING metres x 1,000 metres, which is superimposed on maps of the National Topographic System. The vertical grid lines are called Eastings and the horizontal lines Northings.

The Easting represents the distance of a well in an easterly direction from a given north-south reference line. The Easting is the upper figure in the column.

The Northing represents the distance of a well in a northerly direction from a given east-west reference line. The Northing is the lower figure in the column.

The UTM co-ordinates were calculated after the well locations were plotted on topographic maps, using the locational diagrams submitted by the drillers. If the location of a well is uncertain, then the UTM co-ordinate spaces are filled completely with 9's.

ELEV (Elevation in Feet) This represents the ground  
FEET elevation at the well site in feet above mean sea level. The elevations were determined from plotted locations on the National Topographic maps and are therefore related to the accuracy of the locations and the scale of the maps.

DATE The month and year of well completion are shown in this column.

DRILLER The drilling firm's licence number is given for each well. Table 2, page 268 is a numerical listing of the licence numbers with the corresponding contractors' names and addresses.

CSG DIA INS	(Casing Diameter in Inches) Casing diameters are shown to the nearest inch. Where several sizes of casings are used, the diameter of the upper casing only is given.								
KIND OF WATER	After the construction of each well, the driller evaluates the water quality with a taste and smell test. The kind of water is shown by the following abbreviations: <table> <tr> <td>FR</td><td>Fresh</td></tr> <tr> <td>SA</td><td>Salty</td></tr> <tr> <td>SU</td><td>Sulphur</td></tr> <tr> <td>MN</td><td>Mineral</td></tr> </table>	FR	Fresh	SA	Salty	SU	Sulphur	MN	Mineral
FR	Fresh								
SA	Salty								
SU	Sulphur								
MN	Mineral								
WATER FOUND FEET	This is the distance or distances in feet below ground level at which the driller reported the occurrence(s) of water.								
STAT LVL FEET	(Static Level in Feet) This is the distance below ground level to the water surface when the well is not being pumped. Static levels above ground are not given; the notation FLW, meaning a flowing well, is given for this condition.								
PUMP LVL FEET	(Pumping Level in Feet) This is the distance in feet below ground level to the water surface at the end of the pumping test or the start of a recovery test.								
TEST RATE GPM	(Pumping Test Rate in Imperial Gallons per Minute) This is the rate at which the well was test-pumped. In some cases the stated rate is a recovery rate, or the flow rate of a flowing well. The reported pumping-test rates are usually the results of short-term pumping tests. They do not necessarily represent the rates at which the wells could continue to supply water for prolonged periods of pumping. Continuous pumping at the stated rates could have resulted in some of the wells being pumped dry, while others may have been capable of being pumped steadily at much higher rates than those reported during the pumping tests.								
TEST TIME HR/MIN	(Test Time in Hours and Minutes) This is the length of time during which the pumping or recovery test was conducted. Test times of 100 hours or greater are shown as 99 hours 59 minutes.								

**WATER  
USE**

The following abbreviations are used to describe water use:

Domestic	DO
Stock	ST
Public Supply	PS
Commercial	CO
Industrial	IN
Irrigation	IR
Municipal	MU
Cooling and Air Conditioning	CA

In the classification of water use, domestic (DO) includes supplies for private household use; (ST) includes supplies for watering and washing livestock; public supply (PS) includes supplies for camping grounds, hospitals, churches, schools and public washrooms; commercial (CO) includes supplies for garages, stores, restaurants, motels, drive-in theatres and fish hatcheries; industrial (IN) includes supplies for factories and dairies; irrigation (IR) includes supplies for greenhouses, golf courses, market gardens and other crops; and municipal (MU) includes wells developed for municipal water systems serving five or more residences.

**OWNER/LOG/
